**OhSINT** 

Are you able to use open source intelligence to solve this challenge?

Task 1 O OhSINT

What information can you possible get with just one photo?

Download

Revisar los datos (metadatos)

- exiftool
- foca

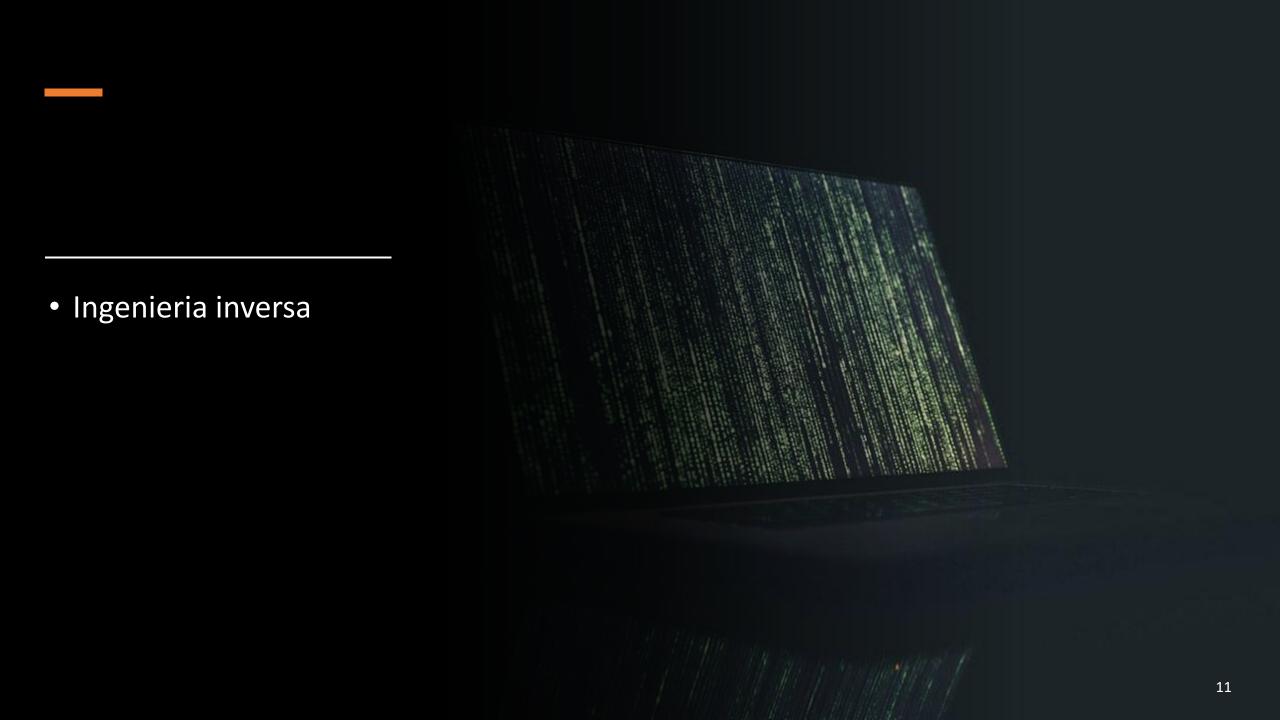

Buscar por buscador, por ejemplo Google

El BSSID, de una red de área local inalámbrica, es un nombre de identificación único de todos los paquetes de una red inalámbrica para identificarlos como parte de esa red. A diferencia del Service Set Identifier, que puede ser usado en múltiples BSS, el BSSID sólo puede hacerlo en una

## **Bounty Hacker**

You talked a big game about being the most elite hacker in the solar system. Prove it and claim your right to the status of Elite Bounty Hacker!

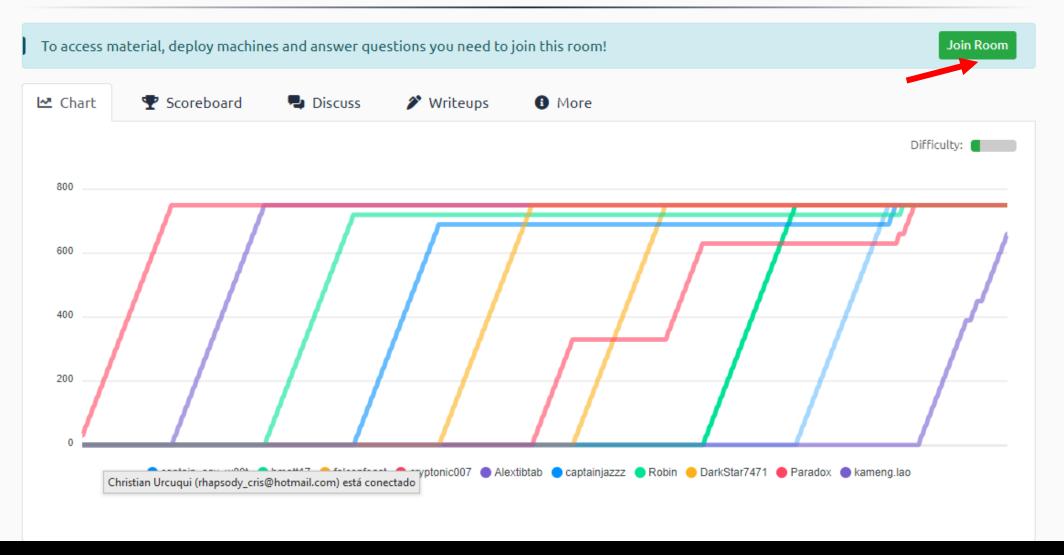

# Web Scanning

☐ Start AttackBox Help

Part of the Red Primer series, intro to web scanning.

## LINUX COMMANDS CHEAT SHEET

## SYSTEM

uname -a =>Displaylinux system information uname -r =>Display kernel release information =>Show how long the system has been running + load uptime nostname =>Show system host name =>Display the IP address of the host hostname last reboot =>Show system reboot history =>Show the current date and time =>Show this month calendar =>Display who is online =>Who you are logged in as whoami finger user =>Display information about user

## HARDWARE

=>Detected hardware and boot messages cat /proc/cpuinfo =>CPU model cat /procepulatio =>CF o model
cat /proc/meminfo =>Hardware memory
cat /proc/interrupts =>Lists the number of interrupts per CPU per I/O device
lshw =>Displays information on hardware configuration of the system =>Displays block device related information in Linux Isblk =>Used and free memory (-m for MB) free -m Ispci -tv =>Show PCI devices Isusb -tv =>Show USB devices dmidecode =>Show hardware info from the BIOS hdparm -i /dev/sda =>Show info about disk sda

=>Do a read speed test on disk sda

=>Test for unreadable blocks on disk sda

## USERS

id =>Show the active user id with login and group last =>Show the sast logins on the system who =>Show who is logged on the system groupadd admin useradd -o "Sam Tomshi" =>g admin -m sam #Create user "sam" =>Delete user sam adduser sam =>Add user "sam"

=>Modify user information

## FILE COMMANDS

usermod

ndparm -tT /dev/sda

badblocks -s /dev/sda

=>Display all information about files/ directories ls -al pwd =>Show the path of current directory mkdir directory-name =>Create a directory rm file-name =>Delete file rm -r directory-nam =>Delete directory recursively rm -f file-name =>Forcefully remove file me =>Forcefully remove directory recursively =>Copy file1 to file2 =>Copy dir1 to dir2, create dir2 if it doesn't exist rm -rf directory-name cp file1 file2 =>0 cp -r dir1 dir2 =>Rename source to dest / move source to directory my file1 file2 In -s /path/to/file-name link-name #Create symbolic link to file-name touch file =>Create or update file =>Place standard input into file =>Output contents of file cat > file more file =>Output first 10 lines of file head file =>Output last 10 lines of file tail file tail -f file =>Output contents of file as it grows starting with the last 10 lines gpg -c file =>Encrypt file gpg file.gpg =>Decrypt file

=>print the number of bytes, words, and lines in files

=>Execute command lines from standard input

## PROCESS RELATED

xargs

fg =>Brings the most recent job to foreground fg n =>Brings job n to the foreground

## FILE PERMISSION RELATED

## NETWORK

ip addr show =>Display all network interfaces and ip address (a iproute2 command powerful than ifconfig) ip address add 192.168.0.1 dev eth0 =>Set ip address ethtool eth0 =>Linux tool to show ethernet status mii-tool eth0 =>Linux tool to show ethernet status =>Send echo request to test connection ping host whois domain =>Get who is information for domain =>Get DNS information for domain dig domain =>Reverse lookup host =>Lookup DNS ip address for the name dig -x host host google.com hostname -i =>Lookup local ip address =>Download file waet file netstat -tupl =>Listing all active listening ports

## COMPRESSION / ARCHIVES

tar cf home.tar home
tar xf file.tar => Extract the files from file tar
=> Create tar named home.tar containing home/
=> Extract the files from file tar
=> Create a tar with gzip compression
=> Compress file and renames it to file.gz

## INSTALL PACKAGE

rpm -i pkgname.rpm =>Install rpm based package rpm -e pkgname =>Remove package

## INSTALL FROM SOURCE

./configure make make install

## SEARCH

grep pattern files =>Search for pattern in files grep -r pattern dir =>Search recursively for pattern in dir =>Find all instances of file =>Find files names that start with "index" =>Find files names that start with "index" =>Find files larger than 10000k in /home

## **LOGIN (SSH AND TELNET)**

ssh user@host =>Connect to host as user
ssh -p port user@host =>Connect to host using specific port
telnet host =>Connect to the system using telnet port

## FILE TRANSFER

scp scp file.txt server2./tmp =>Secure copy file.txt to remote host /tmp folder rsync rsync -a /home/apps /backup/ =>Synchronize source to destination

## DISK USAGE

df –h =>Show free space on mounted filesystems
df -i =>Show free inodes on mounted filesystems
fdisk -l =>Show disks partitions sizes and types
du -ah =>Display disk usage in human readable form
du -sh =>Display total disk usage on the current directory
findmnt =>Displays target mount point for all filesystem
mount device-path mount-point =>Mount a device

## DIRECTORY TRAVERSE

cd .. =>To go up one level of the directory tree
cd =>Go to \$HOME directory
cd /test =>Change to /test directory
